50 MHz Transceiver Evaluation

Sam Goda, WA6JRA, has evaluated the FT-847 and IC-756PRO transceivers. Serious DXers who own one of these can obtain copies of the evaluations by sending him a legalsize SASE with serial number & their 50 MHz DX status.

In summary, he rejects the Yaesu FT-847 on the basis of close-in spurious emissions as high as -35 dB. The amplitude of these spurious emissions changes greatly with as little as 1 kHz change in VFO frequency. The IC-756PRO, on the other hand, is better than its -60 dB specifications, and is ranked highly. Its noise blanker is, however, ineffective on power line noise, while the FT-847's is partially effective.
